

Test case title: Login using non-existent email

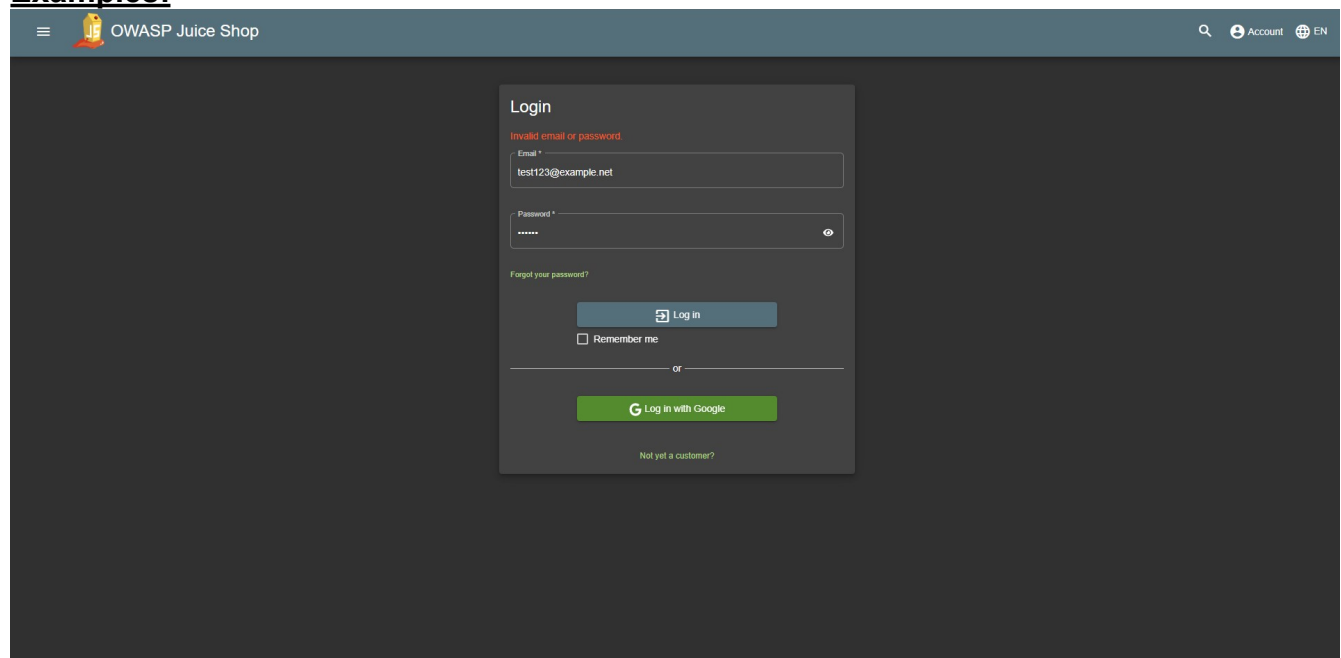

Test case id: TC09

Description: Test case to validate the login when user tries to use an email that doesn't exist in the data base.

<u>Steps</u>	<u>Expected result</u>
Navigate to Login page: https://juice-shop.herokuapp.com/#/login	User should be able to access app's login page.
In the "Email" field, use an email that doesn't exist in the data base, for example: test123@example.net	User should be able to locate and type into the "Email" field.
In the "Password" field, use any valid password (5-40 characters long)	User should be able to locate and type into the "Password" field.
Click the "Log In" button.	User should be able to locate and interact with the "Log In" button.

Final expected result: User should get an alert displaying the text "Invalid email or password" in color red above the email field, indicating there's a problem with the data entered.

Examples:

Login page when trying to use a non-existent email.
