Test case title: Register using invalid email
Test case id: TC02

Description: Test case to validate the registration when user tries to use an invalid email as user email.

Steps	Expected result
Navigate to Register page: _https://juice-shop.herokuapp.com/#/register_	User should be able to access app's register page.
In the "Email" field, type an invalid email address, for example: test@example (doesn't include .com)	User should be able to locate and type into the "Email" field.
In the "Password" field, type a 5-40 characters long password.	User should be able to locate and type into the "Password" field.
In the "Repeat Password" field, type the exact same password as above.	User should be able to locate and interact with the " Repeat Password" field.
Click the "Security Question" field and select any question.	User should be able to see all the options to use as Security Question once the element is clicked.
In field "Answer" type a correct answer for the security question.	User should be able to locate and interact with the "Answer" field.
Click the "Register" button.	User shouldn't be able to locate and interact with the submit button since the email isn't valid.

Final expected result: "Register" button should be disabled and "Email" field should have a red outline indicating the email entrered is not valid and it needs to be fixed before continuing.
