Test case title: Login using existent email but wrong password (API)
Test case id: TC20

Description: Test case to verify when an user tries to login to the app using an existent email but the wrong password for the user.

Steps	Expected result
Before sending the request, create a new account using the UI and replace the email in the payload below with the user's email.	User should be able to create a new account using the UI before sending the request.
Send a POST request to the endpoint and using the payload specified below.	User should be able to send a POST request to the endpoint, and using the predefined payload.
Verify the response of the request.	Request should return a negative response.

Final expected result: Request response should be code 401 Unautohrized since user's email doesn't exist. Request should include a message saying "Invalid email or password."

Data:
