Test case title: Register using invalid email (API)
Test case id: TC12

Description: Test case to validate an user trying to register in the application using an invalid email.

Steps	Expected result
Send a POST request to the endpoint and using the payload specified below.	User should be able to send a POST request to the endpoint, and using the predefined payload.
Verify the response of the request.	Request should return a negative response.

Final expected result: Request should return a negative response, indicating there's a problem with the data provided in the payload (in this case, the email is invalid)

Data:

Endpoint: https://juice-shop.herokuapp.com/api/Users/
